What have we learned from the field about the successes and challenges of re-opening schools?

Nicola Gray PhD FRPharmS
Affiliated Researcher,
UNESCO Chair Global Health & Education
Vice-President for Europe, IAAH
Background to the Survey

• In many countries, by the beginning of May 2020 schools had closed in haste as part of lockdown measures

• COVID-19 had spread through Asia, was particularly rife in Europe but only just penetrating Africa and the Americas

• The value of this survey was to collect perspectives from professionals in the field – first-hand accounts of whether/how schools were re-opening in different countries and the successes and challenges of making this happen
Survey Response

- Access to guidance (20)
- No access (22)
- Schools still open (1)
Elements of the Guidance

- Most of the countries reported joint health and education creation of the guidance
- Ancillary services e.g. transport were included
Elements of the Guidance

- Most of the countries reported joint health and education creation of the guidance
- Ancillary services e.g. transport were included
- Education provided to students about the pandemic included hand washing, social distancing and the nature of the virus
Successes

• Symbolism - the country getting back to normal
• No increase in infections nationally (at the point of response)
• **Good teamwork** in schools, with teachers learning fast and being adaptable
• **Good partnerships** and communication between different actors – e.g. schools, families, local authorities and/or unions
• **Clear, consistent guidance** and good adoption of recommended measures
• Provision of the **resources and equipment** needed
• Goodwill, dedication, commitment and trust
Successes

“The political commitment of communities. The creative spirit of teachers and principals. The preparation and anticipation time granted beforehand. The partnership between families and teachers to reflect together on the conditions for recovery. The provision of inspiring and guiding resources. Times of exchange of practice between establishments.” [France]
Challenges

- Safety concerns and resistance to reopening – of parents, teachers and unions – leading to significant absenteeism
- Lack of time to prepare / lack of resources / lack of equipment
- Logistical issues, including problems in school premises and implementation difficulties
- Concerns that education will suffer during this period (students often not full-time)
- Contradictory information and communication challenges
- Mental health problems and staff fatigue
- Lack of: consultation / local empowerment / trust
Challenges

“Increased disinfection procedures. Managing social distancing in a classroom context (some districts are considering rotating half or fewer students through classrooms on designated days so desks can be spread out). Communicating with parents. Managing school meal programs... Managing mental health issues for students and staff. Keeping staff safe with multiple opportunities for exposure. Finding personal protective equipment for staff.” [USA]
Waiting for Guidance

• Respondents from **20 countries** shared insights or hopes/concerns about what the guidance might contain
• Many countries were providing **public education about the pandemic**, including health literacy initiatives to combat ‘fake news’
• Many respondents were keen to re-open schools as they were **concerned about the inequalities in access** to the remote learning alternatives
• Some respondents had **practical concerns** that the guidance would come out just before the planned reopening dates
• They wanted clear and flexible guidance, adapted to the **local context**, and **sharing of good practice**
Waiting for Guidance

“In most LAC countries, the economic crisis following lock-down will prevent many families that are already stressed from sending kids back to school, they will enter the informal market. Particularly secondary school age adolescents.”
[Latin America & the Caribbean]

“Clear adaptable guidelines, roles and responsibilities of all stakeholders, as well as checklists will help a lot in planning reopening of schools. A compendium of good practices from places where schools have already reopened will be of great help to those who are planning to open in coming months.”
[India]
Reflections

• Guidance available for re-opening schools prioritises health and hygiene measures
• Co-operation between local stakeholders is vital for success
• Scarce mention of local health providers
• Concern about widening inequalities in education
• Availability of resources is variable
• Sharing of good practice is needed
